

Industrial Tiling (Cyclones)

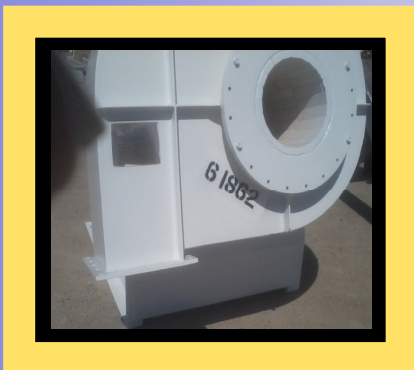

Refurbishment of your equipment is an effective and cost efficient way of extending the life of your infrastructure. (Cyclones & chutes) The equipment can be removed during a planned shutdown and fully repaired in our Mackay Factory. JSIS uses only the best quality materials that will withstand the harsh environment of a wash plant.

Tiles are removed and the substrate repaired and then blasted.

New tiles are cut to size and installed. Wear resist covers tile edges and untiled sections.

Finally the item is sandblasted externally and repainted. Identification numbers are reapplied prior to shipment back to the client.

Preplanning can allow for engineered tiles to be ordered to suite the cyclone/equipment, saving time on tile cutting thereby reducing costs.
