Scan QR to open website

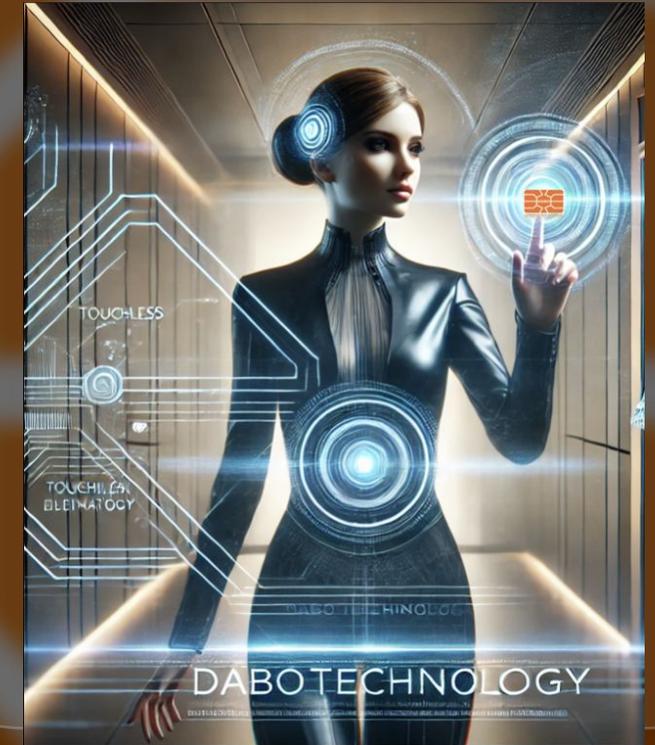

Credibility & readiness

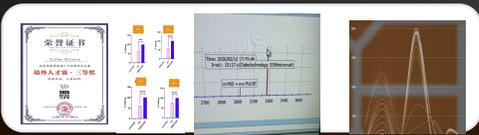

- Working prototypes + comparative test campaigns ("partner version" reports available)
- Structured test documentation: run sheets, chain of custody, deviations/CAPA, KPI dashboards
- International recognition: Tianjin Certificate of Honor (3rd prize, 2025)
- Patents & IP: full technical package after NDA (IP-safe / black-box option)

Fast PoC start — what we need

- Clear use-case + target asset / pilot site
- Named technical counterpart (R&D / Engineering)
- Integration basics: space, power, interfaces, operating windows, safety constraints
- Start NDA + agree success KPIs & PoC timeline (typ. 6–8 weeks)

Award certificate

Prototype (public view)

Patents & IP (after NDA)

Fast start: NDA → Requirements → Integration → Test plan → Demo + KPI report

DABO PhotoMag Platform

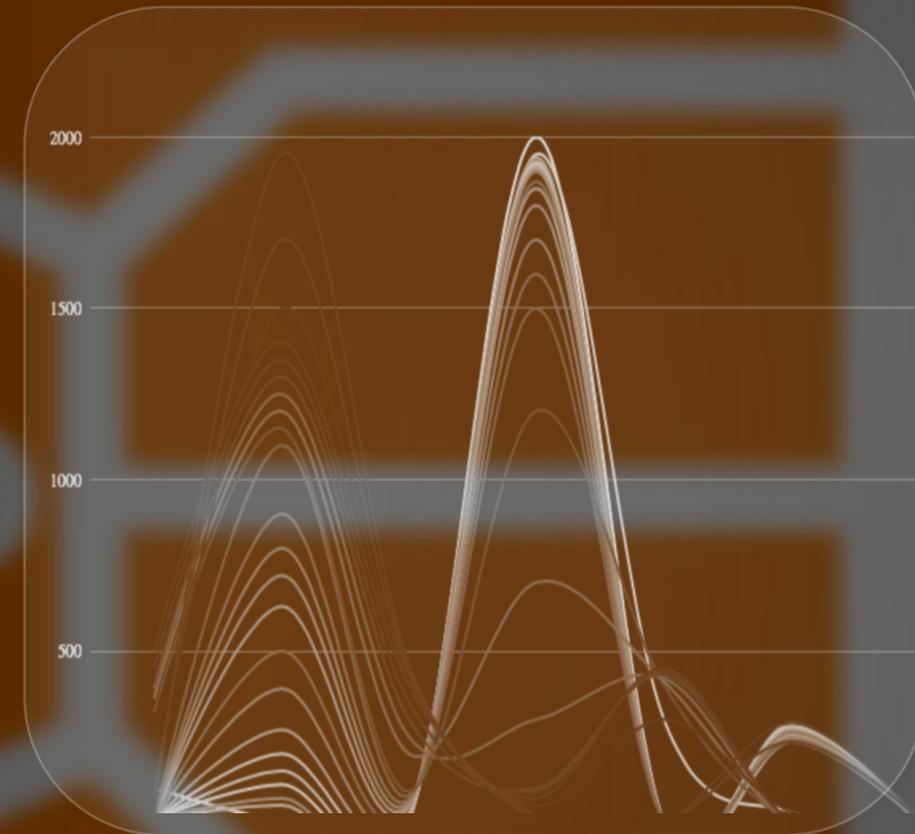

Integrable Hygiene & Compliance Layer for unattended / industrial systems

Closed chamber + safety interlocks (runs only when safe)

Traceability: events, timestamps, critical parameters, faults, exportable logs

Partner / investor version

DABO TECHNOLOGY

Enclosed-chamber UV-C sanitation + optional PhotoMag sequence (magnetic → UV-C → magnetic)

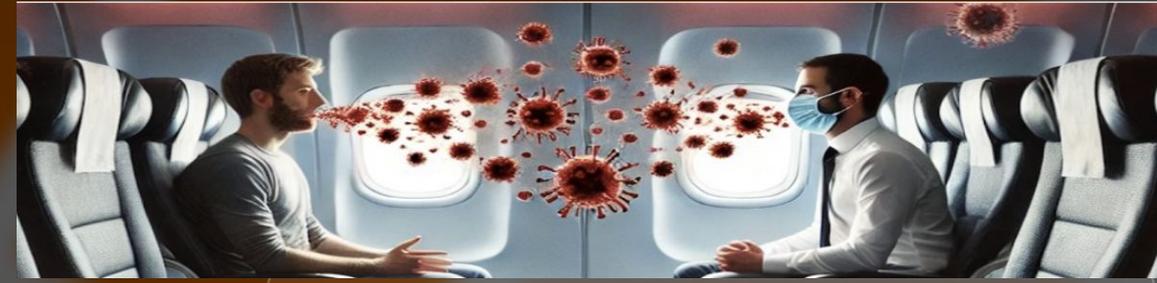

Problem & market need

Contamination risk on high-touch surfaces and critical zones (keypads, handles, pickup ports).

Hard to prove hygiene: no logs, no audit trail, no measurable compliance.

Safety requirement: sanitation must run only when no user is present (interlocks).

Industrial requirement: integrable, traceable, remote-manageable.

High-touch points, safety constraints, and auditability gaps

What we offer

An integrable “Hygiene & Compliance Layer”

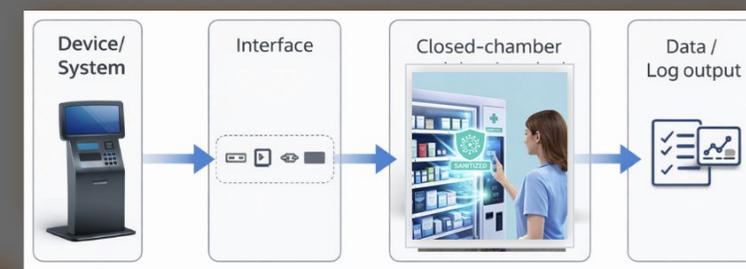

Enclosed-chamber UV-C sanitation (no chemicals).

Optional PhotoMag sequence: magnetic → UV-C → magnetic (controlled cycle).

Full traceability: events, timestamps, dose/critical parameters, states, faults.

OEM-ready integration with device/system telemetry (incl. remote management).

IP-safe architecture: black-box module + standard interfaces.

Traceability (log + export)

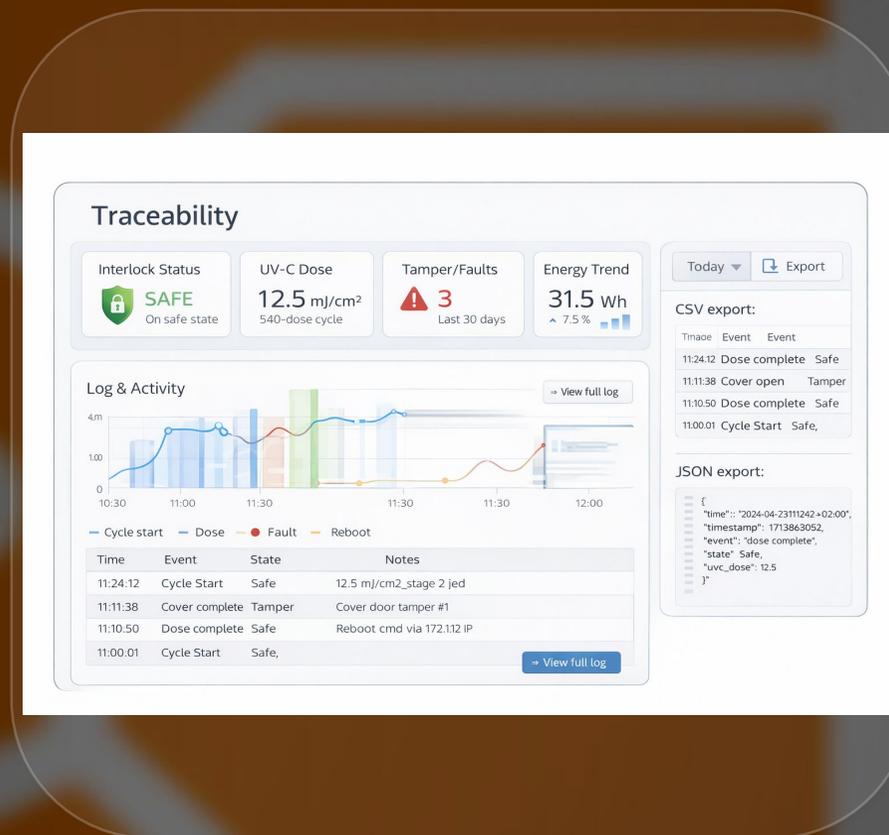

Energy / dose signature + audit-ready logs

Safety interlock status (runs only when safe).

UV-C energy / dose logs (where applicable).

Cycle events + fault/tamper events.

Data export for dashboards and compliance reporting (CSV/JSON).

Why it's worth partnering

Differentiation + scalability + IP protection

Differentiation: provable hygiene + compliance (audit trail).

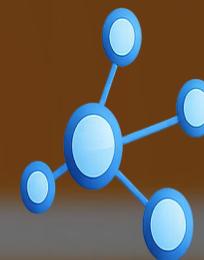

Scalable: modular approach replicated across devices / sites.

IP protection: key capabilities delivered as a black-box module.

Operator-friendly: dashboards and KPIs for fleet management.

Compliance

Scale

IP black-box

Validation path: PoC (6–8 weeks)

Fast, measurable, decision-oriented

- Select **1 scenario + 1 pilot site** (device or area) and confirm basic constraints (**space, power, operating windows, safety**).
- Define KPIs: **stability/uptime, safety interlock, log/audit quality, maintainability**, and (where applicable) **air/filtration performance**.
- Run PoC: **install & commissioning → operate in real conditions → remote monitoring + data collection → report**.
- Output: **GO/NO-GO criteria**, KPI dashboard + exportable logs, and **OEM integration recommendations** (scale-up ready).

“Effectiveness supported by **independent tests** (e.g., **University of Padua**) and by **field demonstrations** in real sites.”

Collaboration models

Collaboration models

Recommended path: PoC → decision

A) OEM module supply

Partner integrates the DABO module into its own products/systems (BOM-ready, integration support).

B) Licensing

Upfront fee + per-unit / per-site royalty (IP protected via black-box implementation).

C) Co-development

Milestone-based joint development with defined deliverables (specs, test plan, integration package, reporting).

Scale-up roadmap

PoC → pre-series → mass production.

Recommended path: PoC → decision

Flow: PoC → Decision → Scale-up

Collaboration model (choose one)

- A OEM module supply
- B Licensing
- C Co-development

Scale-up: PoC → pre-series → mass production

NEXT STEPS — What I'm looking for (China / EU partners)

Confidential – Partner evaluation (IP-safe)

A) Pilot (60 days)

I need **1–2 Chinese OEM partners** for a **60-day pilot (NDA + CAD + machine signals/interfaces)**.

B) China landing channel

I need a structured “landing” path in China: **1 incubator + 1 district/park + 1 industrial partner** for **licensing / scale-up**.

C) Investment (optional)

Open to **seed/strategic investment** to industrialize **1–2 OEM modules** and scale in Asia.

For introductions, please contact the **event organizers**.

Readiness & PoC launch

Scan QR for demo & supporting materials

QR demo kit

- Working prototypes (demo available)
- Structured validation docs (run sheets, chain of custody, CAPA/deviations)
- KPI dashboard concept + event/log schema
- Awards / recognition (details on request)
- Patents & IP: full technical disclosure under NDA

扫码查看演示资料(视频 + 文档)。

Fast start: NDA → requirements → integration → pilot → KPI report

Main applications

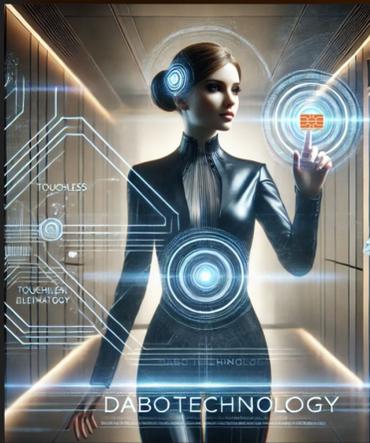

Where the Hygiene & Compliance Layer fits

- A) Terminals / self-service (payments, kiosks, ticketing).
- B) Vending & unattended retail (keypads, dispensing/pickup areas).
- C) Lockers / pickup cabinets (handles, doors, retrieval zones).
- D) Buildings & access control (entry panels, doors, shared touchpoints).
- E) Air / technical rooms (enclosed sanitation modules, compliance logging).

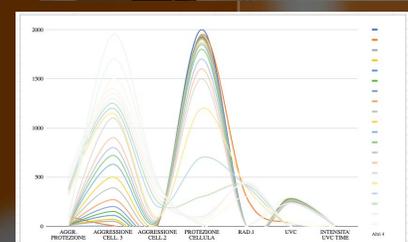

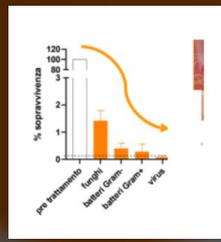

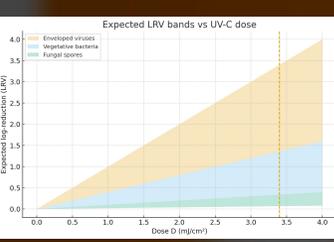

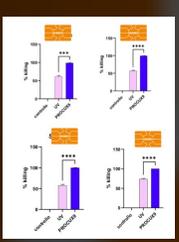

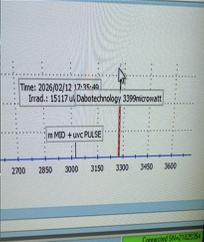

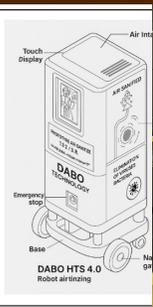

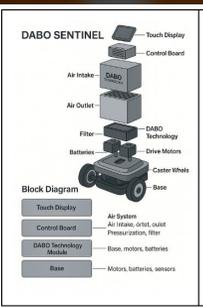

Visual application

CONFIDENTIAL

PROJECT PROTOTYPE ID 7.3.2.R
DABO HTS 4.0 - Con. Modulo PROTOTYPE 7.3.2.R - 01/2018

Item	Quantity	Unit Price	Total Price
Sanitization Station	10	1500	15000
Control Panel	5	300	1500
Touch Display	5	200	1000
Air Intake	5	100	500
Air Outlet	5	100	500
Filter	5	100	500
Batteries	5	100	500
Drive Motors	5	100	500
Custom Wheels	5	100	500
Base	5	100	500

下一步 — 我需要的合作(中国 / 欧盟伙伴)

机密 — 合作伙伴评估版(IP-safe)

A) 试点(60天)

我需要 1-2 家中国 OEM 合作伙伴 开展 60 天试点(需 NDA + CAD + 设备信号/接口)。

B) 落地通道(中国)

我需要一条清晰的中国“落地”路径: 1 家孵化器 + 1 个园区/区县 + 1 家产业合作伙伴, 用于 技术许可 / 规模化。

C) 投资(可选)

如有意, 可讨论 种子轮/战略投资, 用于 1-2 个 OEM 模块工业化 并在亚洲规模化。
