**...our habits...
our lifestyle...**

**... the constant
spread of
pathogens...**

**...the uncertainties
in the use of land,
sea and air
transport...**

**... how can we avoid the spread
of viruses and bacteria?
Is there a way to face this
problem without a continuous
waste of human resources and
chemical products?**

Everyone constantly pays attention not to be contaminated! But do you feel safe to breathe?

Most people go to the supermarket more than once a week. They frequently take the bus, the plane, go to school and meet up with friends drinking a cappuccino at the restaurant.

YOU! ARE YOU SURE NOT TO BE CONTAMINATED?

Our Mission

Our dream is...

To live... and work...

**...without having to use the mask indoors!
Without constantly sanitizing our hands with chemicals!
Without the waste of plastic containers!**

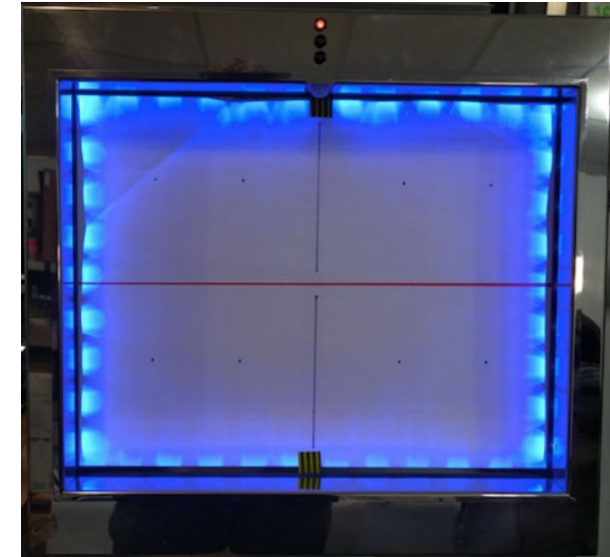

We offer a solution!

Our company has developed a new energy that in a few milliseconds **destroys the viruses and bacteria** present in a certain space with an **effectiveness of 99,99%**.

The technology is easy to activate and completely **safe for humans**.

The application of the technology to different prototypes has allowed us to develop and produce devices that eliminate bacteria and viruses from the **surfaces most frequently touched by more people**.

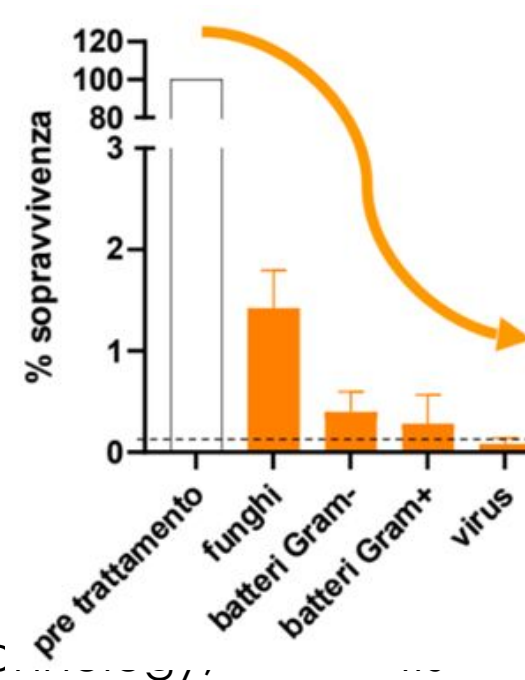

DABO HTS 4.0 technology – how does it work?

Our technology is **certified** and **patented** in Italy.

- It can be customized to **different devices** (touch screen, ATM, vending machines, info touch, push-button panels of elevators, intercoms, etc.)
- It reduces by **99.99%** the microbial load of bacteria, viruses, and fungi (tests performed at the University of Padova)
- It is **completely safe** for human use
- It starts the disinfection **automatically after each use**
- Compared to the UVC technology, it is **energy saving** and disinfect even areas **not in sight!**

Microbiological assays

Antimicrobial reduction of
99.9% against
bacteria, fungi, and virus

EXPLANATION FOR ELECTRONIC TECHNICIANS UPDATE FOR MICROBIOLOGICAL RESEARCHERS

Our big investment was made in researching and analyzing traditional devices and comparing them with ours.

Our satisfaction is that after two years of research and tests we have managed to optimize our radiation, which is **safe for humans, controlled** and, above all, **protected from accidental breakdowns or malfunctions**, in compliance with the regulations and safety dictated by the laws on health and safety.

Not only! The new radiation is also effective in areas **not irradiated on sight**.

.. but the search does not have to end here!
We still can and must improve!

EXPLANATION FOR TECHNICIANS

The advantages over the traditional method of UV-c or other radiation are as follows:

ENERGY SAVING
EFFECTIVENESS ON RADIATION
VISIBLE SURFACES

But above all, it is effective in those areas that are not in sight, so the elimination of viruses and bacteria also occurs on surfaces not affected by UV-C

Our Technology:

Patent DABO HTS 4.0 srl

Automatically applied at:

Pushbuttons and touch screen touched by many people

Applicable for air sanitization for means of transport (looking for investors to test VIRUS IN THE AIR)

Applicable for air sanitization in delimited places (looking for investors to test VIRUS IN THE AIR)

Free Plastic

Energy -30%**

Safe for humans

Virus Killed 99,9%*

No chemical product

Effectiveness viruses and bacteria + 50%**

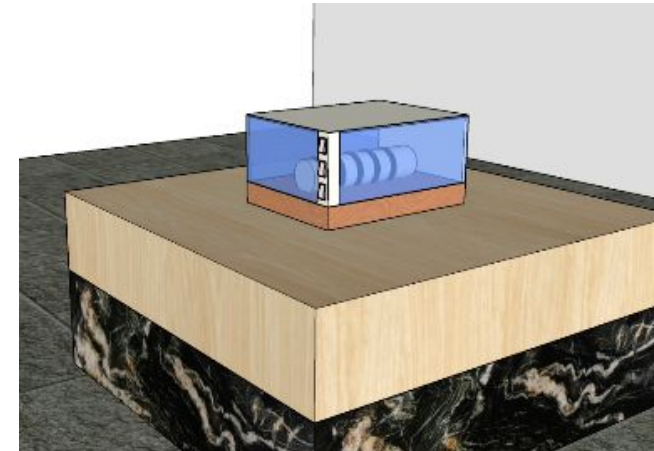

**Compared to competitors that use the Uvc technology

*With our tests carried out in the Microbiology laboratories, we have verified that the total killing of the virus (Vk99.99%) is necessary to avoid its replication.

SAFELY TOUCH - Surfaces and Objects

Thanks to the technology of our invention, we can **irradiate the energies on a surface** or on an **object** and sanitize it in a few seconds, killing the viruses and bacteria present in a simple, safe and effective way.

Same technology, many implementations

Our products:

- **FRAMES:** slide 12
- **POS SANIFICATION:** slide 17
- **JEWELRY SANIFICATION:** slide 21
- **CUTTING BOARDS:** slide 26
- **NEW VENDING:** slide 29
- **SANITIZATION OF AIR:** slide 36

SAFELY TOUCH - FRAMES

These are **frames** with our technology that are applied **around the pushbutton panels** frequently touched by more people.

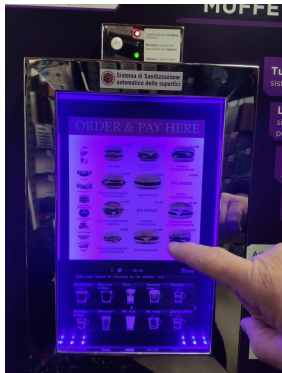

Assembly is **quick** and **easy**. The radiation is **automatic**, which means that the automatic sanitization process begins thanks to a sensor that sees the hand moving away from the control panel.

SAFE TOUCH - FRAMES

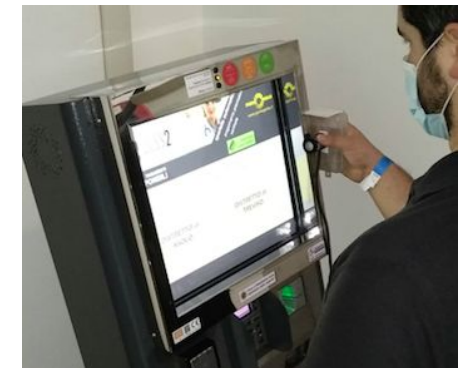

-
- - **Automatically** starts the disinfection procedure after each use
- - Can be customized to **different devices**
(touch screen, ATM, vending machines, info touch, push-button panels of elevators, intercoms, automatic cash etc.)

Automatic catering

Vending

POS SANITIZATION

- Automatic disinfection
- Customer feeling safe
- Time saving
- Easy and safe to active
- No chemical (and plastic) waste
- Remotely controlled
- Performed every EACH use of the POS

POS SANITIZATION

Sanitize the POS from viruses and bacteria **automatically after each human use.**

Patented mechanism and technology.

Suitable for **small** and **large businesses** such as supermarkets, restaurants, bars, shops.

We are **looking** for **investors** for production and marketing.

JEWELRY SANITIZATION

**LiberaTech Box
Oro e Preziosi**

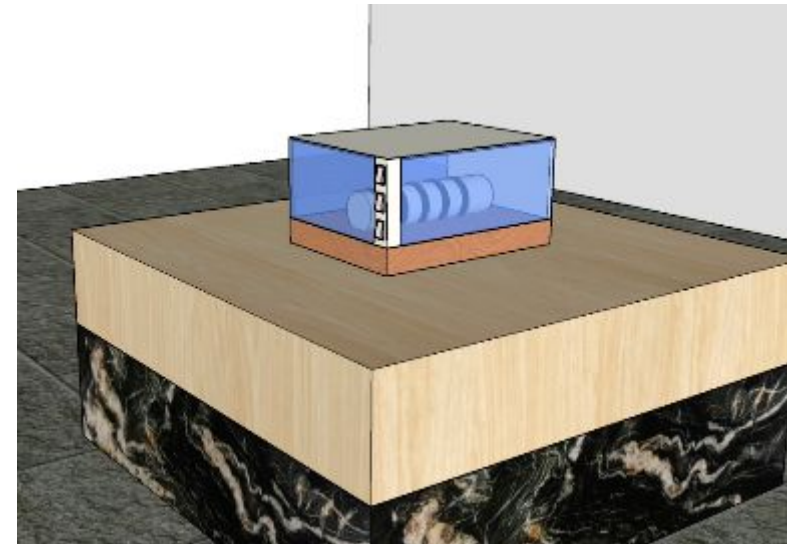

*"Sanitize your valuables
because
your health is precious"*

The **DABO HTS 7.3 technology** also applies to the sanitization of precious items such as **jewelry, watches, glasses** and objects that have **finely chiseled surfaces** that are difficult to sanitize

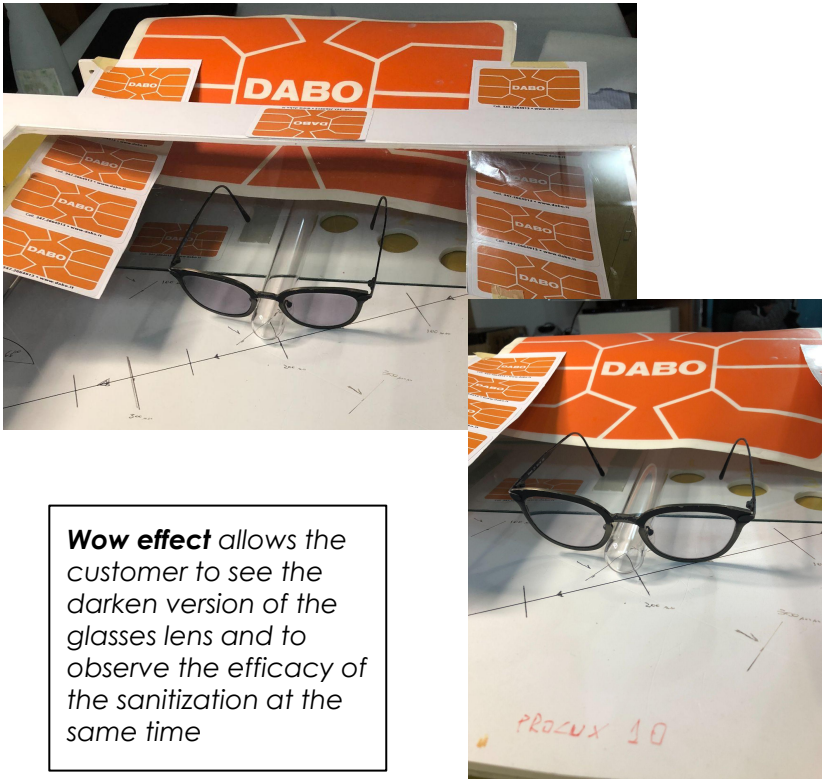

- Better than UV radiation that treats only the exposed surfaces:
our technology is able to reach even the hidden parts of the precious items, sanitizing **deeply** and with an **efficacy** of **99.99%!**
- Better than chemical sanitization that could be inefficient and could damage the items by rubbing them with aggressive alcohol-based gels:
our technology has been designed **not to damage the object at all!**

JEWELRY SANITIZATION

- **LiberaTech Box Oro e Preziosi** was designed, engineered and produced for **goldsmiths, watchmakers** and **optical shops**.
- A version of the Box is also offered to customers who like to have their precious items sanitized and ready to be used **at home and at any time**.
- All companies and shops that offer sanitized products by means of "**LiberaTech Box Oro and Preziosi**" can guarantee their customers treated items to reduce the microbial load by **99.99%**, thus giving **added value to the service provided to customers**.

WOW EFFECT!

The shop assistant presents the product to the customer in the Box. By pressing different buttons, he will decide whether to sanitize it only or to also activate the **wow effect**.

- In the case of precious object we will have **luminous effects** depending on the material of the jewel
- In the case of **glasses with photocromatic lenses** we would have **darkening of the lenses**, all during the sanitization

CUTTING BOARD SANITIZATION

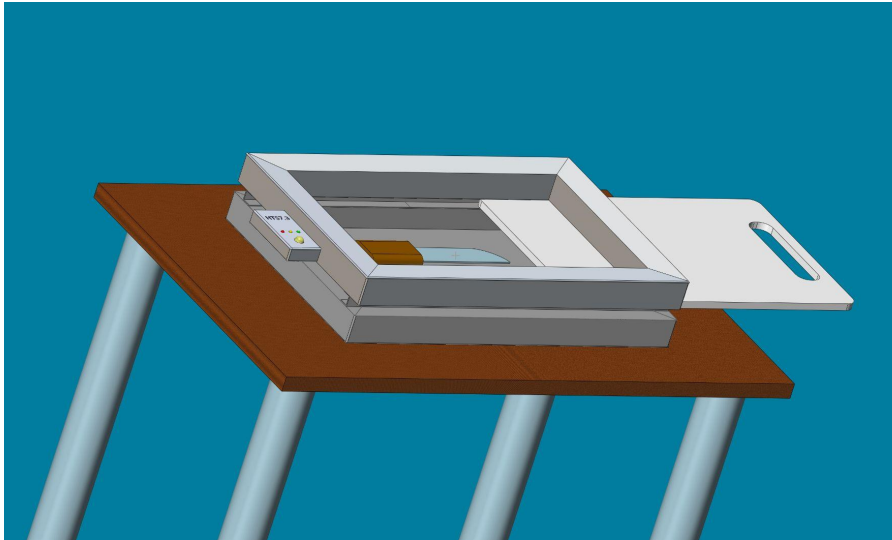

We applied our technology within a frame also to **kitchen cutting boards**, to perform the sanitization in a fast, easy and effective manner.

Our energies kills all viruses and bacteria, included the **salmonella** ones.

CUTTING BOARD SANITIZATION

We have developed both **vertical and horizontal prototypes** and both of them have the possibility of sanitizing also **cutlery**.

The technology is activated by a **button** or a **sensor**

The power of the technology can be **customized** over time depending on the need

The energies reach even the **hidden parts** of knives and cutlery

Dettagli

EXPLANATION FOR TECHNICIANS

The connection to the control board of our devices will take place thanks to the wireless activated by the user app. In fact, at each connection, the device will be updated (if necessary), which will send data relating to sales or uses and more.

DABO HTS 4.0

We are connect

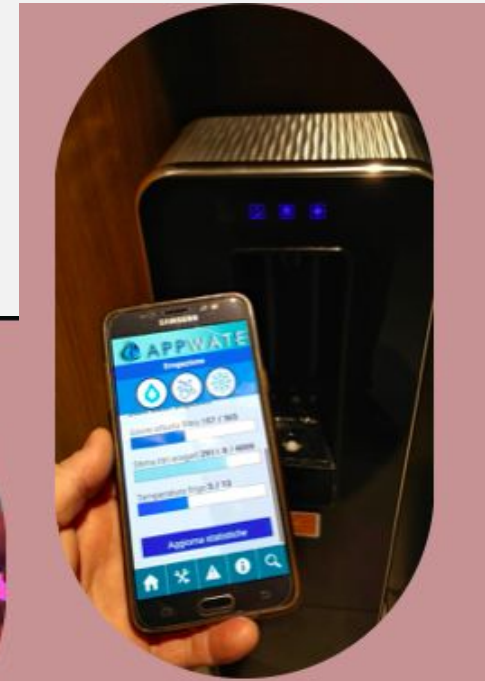

Manager app

User app

Statistics

Updates

Verifications of
operation of the
Remote device.

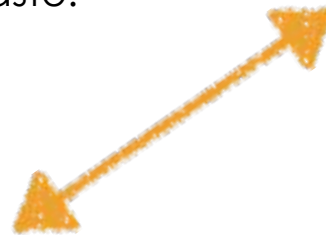

Our technology applied to Vending

- Automatic disinfection
- The customer feels safe
- Less use of human resources
- Easy and safe with automatic activation
- No chemical (and plastic) waste.
- Safe for humans

- Remote controlled

REMOTE CONTROL

- Remote verification of the operation of the devices
- Adaptation of the devices at a distance of radiation and power in knotty making the device always current and effective even after many years.

CUSTOMER SUBSCRIPTION FOR TECHNICAL ASSISTANCE

TECHNICAL PLATFORM IN THE WORK ARE:

- Creation of a platform for **technical assistance** in the area where the devices were sold, thanks to the remote control it will make our devices always functional
- **Remote verification of the operating statistics**, and in the case of sales systems, we may also have the statistics of the products most sold or used.

Air Sanification Project - what are we searching for?

To verify the effectiveness of the air technology, we need:

- A **BSM4 laboratory** with a test area as large as a meeting room. This would allow us to confirm to the world the effectiveness of our technology for eliminating viruses and bacteria from the air.
- Inclusion in our social company of a **business angel** and/or an **active manager**
