

....How it all started

Rologard Global receives many questions about the origin of its products. Our senior management entered the vehicle security barrier market in 1986—a very long time ago. The original barrier, called a PortaPungi (pungi being a take off from sharpened punji sticks used during the Viet Nam war) was developed in response to a call from the U.S. Dept of State for a low cost, no-excavation, no-hydraulics, no-electrical barrier system for use primarily at African embassies and consulates. It was a great success and over the next several years many other types of barriers were developed, crash certified and provided to public and private entities worldwide. In the very late 1980's State requested a portable, one person moveable barrier, again with no excavation/hydraulic/electrical requirements. And our senior management responded with what became the Roll-a-Pungithe "X" configuration began !

Originally the unit, with shipments starting in 1990, comprised an X configuration, bi-directional, with moveable/slideable spars, spars with crow foot surface engaging spar tips, adjustable spar spacing from 18" to 36", a sliding axle arrangement to balance the weight , pin on/off wheels, a foldable handle, barrier to barrier cabled connections and of course our trademark safety orange color scheme. That barrier was a great success with deployments at countless locations including many embassies, Senate and House office facilities, the Capitol power plant, the U.S. Naval Observatory (the Vice Presidents residence) and countless private placements.

Over the years, and with the establishment of Rologard Global Company as a stand alone company, the X configuration continued to play a major role in modular vehicle barriers. The X configuration was and is the mainstay concept for our K2300, K2400, K2600 and the industries leading technology, the K2800. Yes, there have been many options and add-ons over the last 35 years but what has remained is our commitment to providing the latest technologies in vehicle attack mitigation and do so at a price that allows the greatest perimeter security at the lowest possible cost.

We'd be honored to have your business.
