

Summer Program

Ages: 3 through 5 yrs. old

MONDAY-FRIDAY

- Full Day: 7:30 am - 5:30 pm
- Half Day: 7:30 am - 12:30 pm
 - Begins: June 24, 2024
 - Ends: August 23, 2024

*You may register for two or more days per week.

Closed: July 4th & 5th, August 12th & 22nd

Summer Rates

- Half Day Rate: \$49 (7:30 am – 12:30 pm)
 - All Day Rate: \$62 per day
 - Weekly Rate: \$295 (Mon.-Fri.)
- Registration Fee: \$95 new enrollees
- Sunscreen Fee: \$15 per season

*Please feel free to contact us with questions.

PRE-SCHOOL AGE PROGRAM

Our Philosophy

Our Summer program blends fun, adventure, creativity and learning. SELC is a place for children to learn, grow, and thrive in positive and unique ways that will change their young lives forever. The Summer program focuses on science and nature, arts and crafts, literature and language, music and movement, sports and games, and so much more! Research shows that children experience the deepest, most genuine learning when they are having fun! We strive to ensure that children become confident learners by concentrating our focus on meeting the needs of each individual child. We have designed our programs to provide a wonderful experience for all children.

Splash and Wheels Day

S.E.L.C. has planned a splashing good time of weekly water days. Your child's day will be sprinkled with fun water activities such as water balloon tosses, spray bottle tag, shaving cream creations, spray art, and bubble contests. One of our playgrounds will be transformed into our very own water park, overflowing with pools, slides, and sprinklers. Water has never been so much fun! We will also be scheduling weekly/bi-weekly Wheels Days on which children can bring in their bikes (with or without training wheels), skateboards, roller skates, scooters, and most importantly their helmets and other protective gear. **Your child will not be able to ride without such necessities!**

However, if your child does not wish to participate in Wheels Day, there will be other fun activities in store for them.

Room #5 - Three/Four Year Olds

Aloha! Welcome to Hawaii! Did you know that in Hawaiian the word "aloha" means hello and goodbye? That is just one of the fun facts we will be learning as we embark on our Hawaiian adventure!

The surfing will be "maxed out" (as the cool surfers say), as we pretend to surf using the balance beam and create our own individual surfboards. Surf's up dude, this is going to be fun!

We will be learning about the Big Island, Maui and Oahu as well as some of the most famous beaches in Hawaii including Waikiki Beach and Hapuna Beach. During this time, we will talk about all the fun things that can be done on beaches – even here in Rhode Island! We will discuss beach safety and the importance of using sunscreen!

Did you know that the Monk Seal is only found in Hawaii? That's just one of the countless totally awesome animals that live on the Hawaiian Islands! Some of the ones we will learn about include Spinner Dolphins, Hawaiian Hoary Bats and Hawksbill Sea Turtles. We will learn what it means that these animals are endangered, and what we can do keep these beautiful creatures around for many years to come.

Lastly, we will talk about the ways our classroom can embody what the Hawaiians call "Aloha Spirit." This is a feeling that everyone is welcomed and appreciated and free to be themselves. Everyone is Ohana, (family). We hope you will catch the Aloha Spirit by the end of the Summer when we will have a Room 5 Luau complete with learning how to hula and trying delicious Hawaiian foods! We can't wait for the Hawaiian fun to begin! It is going to be an epic Summer in Room 5!

Room #1 - Four/Five Year Olds

Pack your sunscreen and swim gear as you get ready to spend your summer here at the SELC Beach.

From sand to sea, our aspiring oceanographers will be immersed in engaging explorations of the Earth's oceans, including the water itself, and the plants and animals that live there.

Our oceanographer training begins by learning (singing) about the 5 oceans of the world and answering the question, "What makes a body of water an ocean?". We will conduct experiments to determine the properties of salt water versus freshwater, and we will discover how items are able to float in saltwater due to its density.

Scuba gear is required as we dive deep into the sea, exploring the amazing plants and animals that make up an ocean ecosystem. We will document and recreate our findings by setting up models of this underwater world in our sensory tables and dramatic play area and by creating 2- and 3-dimensional models of some of the creatures we learn about.

As the summer progresses, we will move closer inland, through coral reefs and tide pools. We are even going to recreate a tide pool ecosystem right within our classroom for our budding scientists to study!

By the end of the summer, the children will be well on their way to being this generation's Jacques Cousteau!

Our program also incorporates STEAM, which stands for Science, Technology, Engineering, Arts, and Mathematics. STEAM education programs aim to teach students to think critically and have an engineering and design approach towards real-world problems while building on their mathematics and science base. STEAM programs add art to STEM curriculum by drawing on design principles and encouraging creative solutions.
