

- When using a curling iron, wrap the hair around the iron, hold it for 10 seconds and carefully slide the curled fiber off the iron and while holding the warm curl in place and pin it with a clip or bobby pin, until the fiber has cooled where the curl will set. Once the hair is cool, remove the clip or bobby pin and style as desired.

Please make sure which synthetic fiber you have purchased. Not all Elite Hair Designs are heat friendly.

Call if you have any questions. As always, thank you!

Simple Tips

- To avoid damage of your wig or extension, keep it a safe distance from excessive heat such as open flames, ovens, lighters, barbeques, etc.
- When brushing long haired wigs and extensions, it is recommended to use an anti-static brush. Brush the piece or wig starting at the bottom ends.
- To protect the fiber on longer wigs and extensions in-between washings, simply mix equal parts water and Elite Synthetic Leave-In Conditioner in a clean spray bottle, shake and lightly spray on the inside of the hair (below the cap or clip), thus giving it an extra protective shield against frizzing.

Care Guide

Providing the highest quality of service and care, in a friendly and personal setting.

Maintenance and care for all synthetic hair.

Q How often should I clean my Elite wig or extension?

A If worn daily for 10 to 12 hours, they should be washed every 10 to 14 days. *If styling products are used regularly, a build-up will happen and the wig, piece or extension may need to be washed more often.

Q How should I clean my Elite wig or extension?

A It's easy. Follow these simple procedures for the proper cleaning and drying.

1. Fill a clean hand sink or large bowl with 2 quarts of cool water. *Never use hot water.
2. Add two capfuls of Elite Synthetic Hair Shampoo Concentrate to the water; swish around to blend the two, which will create wash water. *Make sure the water and shampoo are completely blended.
3. Place the wig or extension into the wash water; let it soak for approximately 5 minutes.
4. After soaking, carefully swish the wig or extension around in the wash water for one minute.
5. Pull the wig or extension from the wash water and discard the used wash water. Completely rinse out the sink or large bowl of all-of-the wash water residue.
6. Refill the sink or large bowl with clean, cool water and swish around the wig or extension to completely rinse it from of the wash water. Repeat rinse if needed until water is clear
7. For drying wigs, place them on a

collapsible wire wig stand; for extensions lay them flat on a clean, dry towel.

8. Lightly spray your wig or extension with Elite Synthetic Hair Leave-In Conditioner all over the top. For longer haired wigs underneath.
9. Allow your synthetic wig or extension to air dry naturally, it should take approximately 8 hours. Once it is completely dry, you may lightly shake it and style it, before wearing. *Do not use a regular hair brush, hairdryer or heat of any kind to dry or style it.

Q Can I use hairspray on my Elite wig or extension?

A It is recommended to use Elite Synthetic Hairspray as it is designed specifically for the Elite wig or extension. This specially designed spray helps hold the styling of your Elite hair very well and washes out completely because it is water soluble. *Never use sprays that are not water soluble, they will destroy the Elite hair.

Q What other styling products can I use with my Elite wig or extension?

A Elite Synthetic Hair Liquid Styling Mousse is designed specifically for Elite hair and is a great volumizer in a spray bottle that adds ultra-protection, texture and body for fuller feeling wigs and extensions. It is an absolute must for all curly styles to give them longer life.

Q What tools can I use to style my Elite synthetic wig or extension?

A It is recommended to use anti-static brushes as the bristle tips will not come off and are fiber friendly. They are a must for long hair pieces. If combing is necessary, hair picks and styling combs with prongs on one end are best.

Q How should I store my Elite wig or extension?

A For wigs, a wire wig stand will help keep your Elite wig fresh as well as maintain the style, while not wearing it. The wire wig stand is collapsible, which makes it great for packing. For extensions, they are kept best by lying flat on a clean towel or hanging them, in a place where they will not be disturbed.

Make sure to store your wigs or extensions in a clean, dry place, to keep it away from dust and other elements, specifically sources of high heat. Never enclose your wigs or extensions in a box or plastic bag. Except when traveling. Note: if you have purchased one of the heat friendly wigs, please refer to those instructions.

Styling for heat friendly, synthetic hair.

- For washing and conditioning, it is recommended to use Elite Shampoo and Conditioner.
- We suggest using ELITE'S HD Smooth & Detangle hair styling product when curling or straightening any of our "heat friendly" wigs or extensions. Just spray on and use as directed
- When styling, do not curl or straighten Elite Heat Friendly Hair while wearing the wig.
- All Elite heat friendly wigs or extensions should be clean before curling or straightening.
- Use electric or steam hot rollers to curl the hair.
- Blow dryers, curling irons and other thermal tools may be used on low settings, up to 320 Fahrenheit. If the setting is too high or your appliance runs too hot, because they do vary, it can damage the fiber.
- When using a flat iron, take a one inch section of the hair, starting at the roots and run the flat iron over the hair to the ends. Continue this procedure until all the hair is straightened to your liking.
