Users:

Invite your colleagues, contractors, property managers or anyone you like to securely access your building, facilities, and asset data. Customizable roles and permissions make sure that you are always in control of what your users see.

Locations:

Easily add locations as needed at any time.

Assets:

With our built-in templates for mechanical, electrical, plumbing, security, landscape, architectural and many more, adding your building assets is a breeze.

Multi-company:

Add and manage additional companies. Perfect for contractors, subcontractors and licensed trade professionals who want to make jobs drastically easier by having instant access to customers' asset data and plans.

Electrical panel mapping:

Visual electrical panels make it easy for you to always see what each circuit is connected to, including fed-from, fed-to, and affected areas. No more mislabeled panels.

Plumbing mapping:

Instantly see what each plumbing asset is connected to, including fedfrom, fed-to, and affected areas.

HVAC:

Too hot in one area? Too cold in another? Instantly see the electrical connections so that you can identify the cause and adjust or repair things quickly.

Mechanical:

Instantly see all fed-from and fed-to connections to diagnose any problems and get back up and running quickly.

Fire-Life Safety:

Make sure you aren't caught off guard by inspections or endanger anyone. CriticalAsset automates maintenance schedules and reminders so that your fire extinguishers, more detectors and other fire-life safety assets are always in good working order.

Affected area views:

See what is affected when circuits, plumbing or other assets or break down, go offline, or need to be shut down for maintenance or repairs.

Service reminders:

With CriticalAsset, the right people are always notified automatically when assets are due for upcoming service or maintenance.

In-app messaging:

Instantly communicate with your facilities team, HR, IT and any others involved in your facilities asset management and service process.

Reporting Dashboard:

Instantly view, share and print important reports about your building's health.

Mobile App (iOS and Android):

Effortlessly manage your building (s) from your phone or table.

Offline Mode:

Your critical building data is always available, even when your Wi-Fi is not.

Visual asset mapping:

View all your building, plan and asset data on interactive, visual floor plans and maps. No more static paper plans needed.

QR Code Labeling & Scanning:

Print QR codes at the click of a button so that you, your team, and your contractors can instantly scan your building and asset information from their phones, simplifying workflows and expediting work orders.

File Uploading & Storage:

Securely upload, store and share all your building, facilities and asset documents, images, floor plans, maps, inspection reports, drawings and user manuals in one place. Integration with OneDrive, Google Drive, Dropbox and other cloud storage service providers means you'll always have instant access to everything you need.

Data Importing & Exporting:

Easily import and export your asset data from and to Excel, Google Docs or any other spreadsheet.

Definable roles & permissions:

Customizable roles and permissions make sure that you are always in control of what your users see.

Photo Capture & Annotation:

Take and upload pictures from your phone or table and add notes to share with your team.

Invite Contractors & Technicians:

Invite outside contractors and technicians to securely access your building, facilities and asset data on a limited one-time or ongoing basis. You are always in control of what your users see.

Email & phone support:
