REI DRILLING
DIRECTIONAL UNDERGROUND

Directional Drilling Technology

Down-sized oil-field technology designed specifically for mining application provides REI Drilling, Inc. the ability to directionally drill and steer boreholes in excess of 5,000 ft to high accuracy in coal seams. Underground directional drilling equipment includes high thrust permissible drills, high capacity water pumps and downhole mud motors. The MWD/LWD DDMS Survey system with rod communication capability for on-drill navigation allows the user to gain essential downhole information, including the surveyed location of the tool and gamma count data for the surrounding strata.
