

## Flea Preparation

### Preparation Procedures

1. It is mandatory that all pets be treated for fleas by a veterinarian before treatment is done.
2. Cover all fish tanks with a plastic film or plastic bag and turn the air pumps off. They can be reactivated after 6 hours
3. Vacuum the residence, including furniture and discard the bag as well. Floors and carpets should not be washed or shampooed for approximately 4 weeks after the service.
4. Leave access to all floor areas including closet floors and under beds (pick up toys, shoes, scatter mats, plants, etc.). Clothing can remain hanged and items on shelves.
5. Remove all bedding (sheets, pillowcases, comforters, blankets, bed skirts, etc.).
6. Cover or remove all food and items from counters and tables.
7. All occupants and animals must vacate for a minimum of 6 hours. If there is a pregnancy, a child under the age of 2, a respiratory problem or allergic sensitivities, we recommend 24 hours.
