

BEFORE YOU BEGIN

Leather must be cleaned and fully dry before conditioning.

See Luxury Leather Cleaner instructions for proper cleaning protocol.

- Always test a small, inconspicuous area first.
- Apply product to the applicator, not directly onto the leather.

If you have concerns about color stability or previous damage, contact us before proceeding.

APPLICATION INSTRUCTIONS

Step 1 Preparation

- Shake well before use.
- Apply approximately 2 ounces of conditioner directly onto a microfiber applicator mitt.
- Do not pour directly onto the leather.

Work in small sections, such as one quarter of a seat cushion at a time.

Step 2 Distribution Method

- Apply using side to side strokes first.
- Then apply upward strokes.
- Follow with up and down strokes to fully distribute the material.
- Finish with smooth, even strokes for a uniform final appearance.

WHAT YOU WILL SEE

At first, the conditioner may appear slightly thick or leave a light glaze look.

Continue evening it out until it becomes more translucent and evenly distributed.

The conditioner will dry clear.

DRYING AND USE

After application, the surface will begin to turn clear as the conditioner absorbs and levels.

Recommended wait time before normal use is 3 to 4 hours.

Dry time depends on climate conditions:

- Warmer and drier environments allow faster curing.
- Colder or more humid environments require additional time.

Before use, the leather should feel:

- Dry to the touch
- Non tacky
- Smooth and natural by hand

If there is any doubt, wait until the next day to ensure full cure.

Do not use the furniture until it feels completely dry.

No additional polishing is required.

PROFESSIONAL TIPS

If cushions are removable, use a folding table, kitchen table, or counter as your workspace.

Cover the surface with a drop cloth or moving blanket to prevent the cushion from sliding and to protect the work surface. This allows for better control and a more even finish.

Plan ahead for where you will place the cushions while they are drying so you do not lose your entire workspace. Have a designated drying area ready before you begin.

For tightly pulled leather, dining chairs, or smooth flat surfaces, a 4 inch foam roller may be used for an ultra even finish.

The microfiber mitt works very well on its own. The foam roller is a professional technique for maximum consistency.

HOW MUCH TO USE

As a general guide:

- Approximately 2 ounces per quarter cushion
- Do not over apply
- More is not better

Apply only enough to achieve even coverage.

MAINTENANCE RECOMMENDATION

For residential use, conditioning every 6 to 12 months is typically recommended depending on wear and usage.

High use seating areas may require more frequent application.
