

Evidence-based, non-toxic products for the freedom in nature and at home

Since 2010, our brand has been looking for breakthrough solutions to open a new chapter in the fight against parasites. We focus on evidence-based solutions that are harmless for any user and also to nature. Our product portfolio within the TICKLESS® and MITELESS® brands feature the newest technology and provide the best solution against parasites such as ticks, fleas and dust mites.

All of our brands represent the same high standards, so that your customers always get the best quality products. Today we are one of Europe's leading non-toxic parasite repeller manufacturer, stretching over 52 countries in five continents. ProtectONE Ltd's headquarter and manufacturing facilities are in Budapest, Hungary.

Always on the innovative edge, our growing product portfolio is just one proof to that. We are continuously working on improving our products, providing better and better solutions for our customers as well as for our partners. Our dedicated team has always strived to provide the most innovative, most versatile solutions for our loved ones.

We hope we can welcome you among our partners in the near future!

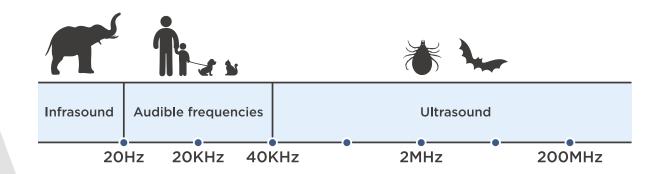

TICKLESS® features/How it works

The TICKLESS® devices work with 40 kHz ultrasound, the emitted ultrasonic pulses interfere with the ability of ticks and fleas to orient themselves. The frequency range of our devices are not disturbing for humans, animals or wildlife, making it safe to use for children, adults and pets.

Multiple tests | Backed by scientific studies

ProtectOne Technology was tested in 2012 by the Medical Microbiology and Infectious Diseases Laboratory, University of Camerino (ranked as the best Italian university by Guida Censis Repubblica 2011 and 2012).

The results showed that the test dogs, which already had a tick or flea, TICKLESS® prevented any worsening of the infestation and in some cases reduced the infestations. The test also showed that in dogs that were not infested prior to the start of the study, ProtectOne Technology did not allow the number of parasites to increase.

ProtectOne® Technology was first tested in 1993 by the University of Milano. It was proved to be effective against ticks and fleas.

Easy to use, easy to love

Award Winning Brand

Our recognitions through the years

2020/ BIGSEE Product Design Awards

Tickless Mini products won the BigSEE Product Design Awards, the jury board was impressed by the clean, minimalist design of the Tickless Mini, the award was given to our product for its environmental role, safety, efficiency, and chemical-free status.

Winning this award is an honor and a testimonial to our commitment to developing innovative and effective options for pet owners and their beloved companion.

Greener tomorrow

ProtectOne Earth

Did you know that every minute, the equivalent of one garbage truck of plastic enters the ocean? Or how about the fact that global temperatures are expected to rise by 1.5 degrees Celsius by 2030? Our company recognizes the urgency of the environmental crisis and is committed to being part of the solution. Through our **environmental program,** ProtectOne Earth, we're taking concrete steps to **reduce our ecological footprint** and create a more sustainable business model. We are all responsible for sustainability. In order to do our bit for the planet, we all have to play our role.

Let's take a moment to celebrate our achievements so far. We've accomplished considerable progress in our environmental initiatives thanks to our team's dedication and hard work. Since our ProtectOne Earth program started, we have been able to fulfill several of the program goals. We achieved that one of our best-selling products, the Tickless Mini in black, is made of 50% recyclable plastic, and we introduced our new environmentally friendly product line, the Tickless Eco which has a biodegradable plastic cover. As a result of these two product advancement our use of new plastic has been significantly reduced. Additionally, we are continually modifying the packaging of our products in order to make them more sustainable, which is why we began working with a printing house who have green sustainability certification.

As we look ahead, we know that there's still much more work to be done. However, we're up for the **challenge**, and we're inviting each one of you to **join us** on this important journey.

Together, we can make a meaningful difference for our planet and future generations. So, let's take action today and build a **greener tomorrow**, one step at a time! Together, we can make a real impact and leave a lasting legacy of environmental stewardship.

In alignment with these values, we are proud to announce that we are now Certified Plastic Neutral! Teaming up with rePurpose Global, we're funding the recovery and ethical processing of nature-bound plastic waste equivalent to our packaging usage. Through the rePurpose Global impact project, we're set to collect 3895 kilograms of plastic in 2024!

TICKLESS® EcoPet

The new, more sustainable generation of chemical-free, ultrasonic tick and flea repellents

Biodegradable/compostable cover

TICKLESS® ECOPET keeps ticks and fleas away without the use of dangerous chemicals. It's easy to use, just attach the tiny device to your pet's collar or harness and it will keep the parasites away at least 6 months after activation, so you can enjoy nature without worry.

Our new, earth-friendly ECO products are made for the sake of environmental awareness and sustainability, for you, for your loved ones and for our planet! Our new product line is made from biodegradable materials, so you can take another small step for our Earth while still keeping safe those, who are most important to you!

TICKLESS® EcoKid

The new, more sustainable generation of chemical-free, ultrasonic tick repellents

Biodegradable/compostable cover

TICKLESS® ECOKID make your time spent in nature worry-free: the device repels ticks, without the use of dangerous chemicals. Simply attach the device securely to your child's clothing, and it will keep ticks away at least 6 months after activation, allowing your whole family to enjoy nature without care or worry. Thanks to its ease of use an excellent choice for any outdoor program, such as class trip, as the child does not have to reapply the repellent in certain intervals, which they may forget.

In addition to being chemical-free, we are constantly striving to be more earth-friendly, since environmental awareness and sustainability are not just a growing trend, but that is the only way we can do it for a more livable future. That's why the cover of our new ECO product line is made of a biodegradable material, making it even more eco friendly.

TICKLESS® Home/ Ultrasonic tick, flea and dust mite repellent for pets at home

Many people believe that dust mite allergies only affect humans, but our pets are also at risk! According to the results of our most recent research, dust mite allergy is a much more common problem in dogs and cats than we previously thought.

According to the results of our most recent research in which 78 environmentally allergic dogs participated, 92% of them were allergic to dust mites!

We know that our four-legged friend is one of the most important members of the family, and we would do anything to ensure that it is happy and healthy. Don't let ticks, fleas and dust mites disturb your pet's peace of mind!

TICKLESS® Home is 100% chemical-free repellent working with innovative ultrasonic technology that effectively protects your pet without emitting any chemicals or harmful substances. The method of using is simple, just plug it into a power socket and let it do its job, covering a space as big as 30 sqm/320 sqft.

MITELESS® ULTRASONIC PROTECTION AGAINST DUST MITES

MITELESS®

ULTRASONIC PROTECTION AGAINST DUST MITES

This revolutionary product can be a long-term solution agains dust allergy. It combats the presence of dust mites, a major cause of allergies affecting the respiratory system.

A dust mite is so small it's practically invisible. But these bug-like creatures thrive in your home: they feed mainly on the tiny flakes of human skin that people shed each day. These flakes work their way deep into the inner layers of furniture, carpets, bedding and even stuffed toys.

MITELESS® operates by emitting ultrasonic pulses that disturbs dust mites. It reduces the concentration of mites in the environment in which it is installed. The first results can be noticed a couple of weeks after the device has been switched on!

Dust mites may be the most common trigger of year-round allergies and asthma.

MITELESS® Ultrasonic dust mite repellent device for home

This innovative technology effectively reduces the concentration of dust mites within weeks and eases the symptoms of dust allergy, creating a clean and fresh environment in your home. Enjoy your clean and healthy home without dust mites!

It's environmentally friendly, and contains no chemicals and perfumes, making it safe to use with little children and pets in the house. The method of using is simple, just plug it into a power socket and let it do its job, covering a space as big as 30 sqm/320 sqft.

MITELESS® uses ultrasound to dust mites by disturbing them at a frequency that does not bother people or animals.
