

## FIX-ALL

### THE BROAD SPECTRUM DETOXYFIER

**Fix all** is not a toxin binder.

**Fix all** combines **selective adsorption** with **active detoxification** and **immune support** for comprehensive protection.

The formulation is capable of adsorbing specific mycotoxins, reducing their bioavailability in the gastrointestinal tract.

In addition, it contains **targeted detoxifying ingredients** designed to **inactivate more complex mycotoxins**, transforming them into **non-toxic, biologically inactive compounds**.

This dual mechanism ensures a broader and more effective defense against a wide spectrum of mycotoxin challenges.

**Fix all** is also enriched with **immunostimulatory factors** that help counteract the **immunosuppressive effects of mycotoxins**, supporting the animal's natural defense mechanisms and overall health.
