ENGINEERED FOR A SECURE FUTURE

Circutor Meet 2025:

Launching the Next Evolution in Power Quality and Innovative Solutions for Stability and Efficiency

WESTCO, in partnership with **Circutor**, successfully hosted Circutor Meet 2025, a landmark gathering that brought together industry leaders, professionals, and partners to advance discussions on power quality and sustainable energy solutions.

The event was formally opened by Mr. Jek Peñalosa, who delivered welcoming remarks and introduced WESTCO's mission, expertise, and role in delivering advanced energy solutions in the Philippines.

Active participant on question and answer

Setting the stage for the technical program, WESTCO's President, Engr. Rodolfo Peñalosa, underscored the importance of developing a deeper understanding of harmonics to effectively address the country's persistent power quality challenges. He emphasized that through advanced harmonic analysis and corrective measures, organizations can significantly enhance system efficiency, improve power reliability, and ensure long-term grid stability and sustainability.

Building on this perspective, Circutor's principal speaker, Engr. Alex Sanchez, showcased innovative solutions including active harmonic filters, power monitoring systems, and energy management platforms. His presentation highlighted how these technologies directly respond to the issues raised by Engr. Penalosa, equipping industries with tools to achieve operational efficiency, regulatory compliance, and sustainable energy performance.

Circutor Meet 2025

underscored the importance of continuous innovation and collaboration in achieving long-term energy efficiency and sustainability goals.

With strong participation and meaningful knowledge exchange, the event marked a significant step forward in shaping the future of power quality solutions.

To further engage participants, the program also featured a raffle draw, adding an interactive element that fostered camaraderie and excitement among attendees, making the day both highly informative and memorable.

Participants gained valuable insights through technical orientations, case studies, and product showcases, all of which highlighted Circutor's commitment to delivering reliable and forward-looking solutions. In addition, the event created opportunities for networking, allowing professionals to exchange knowledge and build stronger collaborations within the energy sector.

Pre-Event Activities: September 30, 2025

Ahead of the main event, Engr. Alex Sanchez conducted an exclusive in-house technical training for WESTCO's sales team, engineers, and representatives from VCP. The session provided participants with in-depth knowledge of Circutor's advanced solutions and their practical applications in addressing today's energy sector challenges.

Following the training, Engr. Sanchez, together with WESTCO's Business Development Manager, Mr. Nelson Complido, visited one of WESTCO's key clients. The visit served as an opportunity to introduce Circutor's expertise firsthand while fostering strategic discussions on strengthening collaboration and aligning solutions with the evolving needs of the local market.

Company visit of WESTCO's key clients

On the following day, Engr. Sanchez, accompanied by WESTCO's engineering team, visited MERALCO—another key client of WESTCO. During the engagement, he shared critical insights on the importance of power quality solutions in large-scale utility operations. This interaction emphasized the growing relevance of Circutor's technologies in ensuring efficiency, reliability, and sustainability in the country's power distribution systems.
