

Why Global?

.....

At Global we understand you have a lot of choices of partners when it comes to entrusting your fire and life safety needs. We believe there are a few key differences that set us apart from our competitors, allowing us to truly be your partner. Together with our associates, we seek to serve the needs of our customers to provide the personalized attention to projects and details that ensures our customers are satisfied with the end result.

Our Vision

.....

Global is more than a name, it's how we think. We are a growing group of associates always striving together to meet customer needs, while maintaining the health of our company. Our passion for customer service shows in the urgency with which we treat our customers' requests.

Our Mission

.....

Delivering exceptional service, on time, every time.

Commercial & Office

Single Buildings up to Multi-Size Complexes

Office buildings typically maximize floor area with employees/ tenants. As a result, we often find office buildings to have a higher occupant load than other facilities. In this circumstance, it may be essential for a building code expert to develop egress plans that detail the proper path of travel for all building occupants. When building occupant load exceeds stair capacities, the code expert must develop a unique solution to protect building occupants (such as installation of a horizontal exit or exit passageway).

Global provides full-scale code analyses for office buildings, including Building Code consulting, Fire Code consulting, and site egress analyses. We seek to provide an invaluable level of service to our clients through negotiating with local authorities where we feel that an equivalent level of protection can be provided. We also provide all types of fire protection system design and systems commissioning for office structures.

Global Services Highly Suited to Meet Your Needs
