

Why Global?

At Global we understand you have a lot of choices of partners when it comes to entrusting your fire and life safety needs. We believe there are a few key differences that set us apart from our competitors, allowing us to truly be your partner. Together with our associates, we seek to serve the needs of our customers to provide the personalized attention to projects and details that ensures our customers are satisfied with the end result.

Our Vision

Global is more than a name, it's how we think. We are a growing group of associates always striving together to meet customer needs, while maintaining the health of our company. Our passion for customer service shows in the urgency with which we treat our customers' requests.

Our Mission

Delivering exceptional service, on time, every time.

Critical Environments

Server Rooms and Buildings | Critical Infrastructure | Switch Gear • Clean Rooms

Because there is generally a lower occupant load and no greater fuel load at high-tech facilities, the life-safety risk and potential fire exposure risk to adjacent properties is minimal. As a result, building codes typically don't require any unique fire protection features to protect these facilities. However, it is often in the owner's best interest to employ internal standards that protect these facilities with the most reliable fire alarm and automatic extinguishing systems.

For high-tech facilities, Global is often retained to design and commission the installation of fast detection system (such as VESDA) and clean agent extinguishing systems to provide very early fire detection and very clean automatic suppression to minimize the required clean up and eliminate potential damage incurred from installing water based fire extinguishing systems.

Global Services Highly Suited to Meet Your Needs

- Engineering & Consulting Services
- Engineering Judgements
- Third Party Inspection Services
- Active Fire Protection System Design
- Passive Fire Protection System Design
- Fire Barrier Audits & Management
