

Why Global?

At Global we understand you have a lot of choices of partners when it comes to entrusting your fire and life safety needs. We believe there are a few key differences that set us apart from our competitors, allowing us to truly be your partner. Together with our associates, we seek to serve the needs of our customers to provide the personalized attention to projects and details that ensures our customers are satisfied with the end result.

Our Vision

Global is more than a name, it's how we think. We are a growing group of associates always striving together to meet customer needs, while maintaining the health of our company. Our passion for customer service shows in the urgency with which we treat our customers' requests.

Our Mission

Delivering exceptional service, on time, every time.

Petro-Chemical

Refineries | Process Plants | Labs

Like energy and power plants, conventional building and fire codes do not provide adequate information and direction when it comes to protecting LNG, Refineries and other types of processing facilities. In order to ensure these complexes are designed and constructed safely, with minimal risk and down time if a problem does occur, good engineering practice as well as an experienced understanding of the National Fire Protection Association (NFPA) Standard, ISO International Standards and UL standards are a must for both H and JF ratings.

Global provides Fire Protection Design Basis Reports as well as the corresponding completed systems design for all types of refinery and process facilities. We provide our clients with an unparalleled knowledge of national and International standards related to your facility, and we provide a common sense perspective combined with good engineering practice in providing the best possible approach to protecting these facilities.

Global Services Highly Suited to Meet Your Needs

- Engineering & Consulting Services
- Engineering Judgements
- Third Party Inspection Services
- Active Fire Protection System Design
- Passive Fire Protection System Design
- Water System Modeling
- Hazard and Risk Management
- Like Safety
