

Why Global?

.....

At Global we understand you have a lot of choices of partners when it comes to entrusting your fire and life safety needs. We believe there are a few key differences that set us apart from our competitors, allowing us to truly be your partner. Together with our associates, we seek to serve the needs of our customers to provide the personalized attention to projects and details that ensures our customers are satisfied with the end result.

Our Vision

.....

Global is more than a name, it's how we think. We are a growing group of associates always striving together to meet customer needs, while maintaining the health of our company. Our passion for customer service shows in the urgency with which we treat our customers' requests.

Our Mission

.....

Delivering exceptional service, on time, every time.

Warehouse & Transportation

Distribution | Cross-Dock | Terminals

Warehouses typically have a lower occupant load than other facilities, while having a much higher combustible fuel load. As a result, it typically takes more water or extinguishing agent, and a more sophisticated design approach to control a fire that occurs in such a facility.

In addition to building and fire code analyses, Global will address the fire sprinkler system water demand necessary based on NFPA and/or performance based requirements. Our analysis is based on criteria such as material composition of the protected product and storage arrangement, as well as water supply availability. Our involvement upfront can potentially eliminate the need for a fire pump through proper fire service water main planning, jurisdictional interface, and provision of bid criteria. Our consulting, design, and commissioning services are a strong lineup to ensure the most cost effective solution to warehouse protection issues.

For these occupancies, Global will target and mitigate potential property and life safety threats. We will analyze a facility's entire exit capacity and develop the simplest and most effective approach to quickly get occupants to a safe dispersal area outside the building. For large warehouses, Global is often retained to provide fire and smoke modeling and the design of smoke control systems.

Global Services Highly Suited to Meet Your Needs

- Engineering & Consulting Services
- Fire Alarm Systems Design
- Fire Suppression System Design
- Detection Systems Design
- Systems Testing Services
- Performance Based Criteria
- Size Due Diligence Services
- High Piles Stock Plans
