Emergency Response Products with Fall Detection Feature

Emergency Response Products with a fall detection feature on an electronic device can be activated by an event such as a fall and notifies the system (provider) of such an event. The enhanced fall detection capacity combines the basic elements of PERS and is designed to:

- Detect a fall and automatically place a call for help when the consumer is unable to press the help button. It immediately contacts Emergence Medical Services followed by emergency contacts when no response is made by the consumer.
