

## How it works

Each sealing machine includes one standard heater set.

Heater set includes the top heating element with film cutting blades and the bottom plate which holds the trays in place, ready to be sealed.

Interchangeable heater sets enable different trays to be sealed by the same machine, and are easily changeable, with the process taking less than 30 seconds.

Films are dispensed from a food grade box. Box sits on the top of machine allowing the film to enter through a narrow slit at the bottom of the box.

A wide variety of tray options are available.

## Tray Sealer & Heater Sets

### AUTO TRAY SEALER EHQ-350

- Self-loading and unloading technology
- 110-120v/60hz
- Standard Heater Set Included
