

Bear Hill Reservoir

Pensar and North East Water contracted Aqua Prep to prepare the concrete surface for polyurea application. Aqua Prep employed an Aqua Cutter 710V robot manufactured by Aquajet Systems, equipped with an Aqua Cutter Spine attachment.

This advanced equipment made the project more efficient and allowed the operator to work safely from a distance. After the surface preparation, Watertite Waterproofing was brought in to apply the polyurea system, known for its excellent protective and waterproofing properties.

This sequence demonstrates a well-planned approach to enhancing the durability of the concrete structure.
