

## Falch Multi Worker 250

The Multi Worker 250 unit is a light, compact, semi-automated water jetting robotic tool that is simple to operate, easily transportable, and simple to assemble.

The Multi Worker 250 is more productive than conventional handgun methods. It is safer to operate, removing the operator from the direct interface with a handgun and the associated reaction forces.

The Multi Worker 250 can operate to a maximum reaction force of 60kg (600N).

Compared to traditional hand-lanced water jetting methods, the Multi Worker 250 can deliver up to 200-400% more efficiency. This efficiency translates into cost savings by reducing the amount of time and labour required for each job, lowering labour costs by 50-70%.

This water jetting unit is light, compact, and easy to transport and assemble.

Weighing 89kg and measuring 610 x 750 x 1600 mm, the Multi Worker 250 is compact enough to be transported and set up yet solid enough to withstand the rigours of daily use.
