

Cast Iron Pipe Clean

Southern Rural Water's Pykes Creek Reservoir, 2021, Aqua Prep completed a fascinating project that bridges Victorian-era engineering with modern infrastructure solutions. Our team tackled the restoration of a century-old cast iron pipe, preparing it for its next chapter of service through concrete relining.

The project's scope presented a unique engineering challenge. Working 30 metres below ground in a 60-metre length pipe (roughly the height of a 10-storey building deep), our team navigated complex confined space conditions while managing H₂S gas presence.

Our goal was to transform a heavily rusted cast iron surface into one ready for modern concrete relining.
