

KCGM - Northern Star

KCGM engaged SRG and sub-contractor, Aqua Prep to perform hydro demolition on 250 square meters of mill deck to a depth of 300 mm.

The 10-day project utilised robotic technology to ensure precision and safety, overcoming challenges that had affected previous contractors. Key strategies included remote-operated hydro demolition and vacuum trucks to remove debris.

This approach successfully removed the concrete without damaging the underlying structure, prioritised worker safety, and minimised disruption to ongoing operations, demonstrating the effectiveness of advanced demolition techniques in complex industrial environments.
