

M7-M12 Freeway Upgrade JH GROUP

Aqua Prep is undertaking an extensive Hydro Demolition project across 37 bridges in Western Sydney using Aquacutter Robots.

This ongoing initiative, scheduled over 18 months, has already seen AP successfully remove over 120m³ of concrete through their specialised bridge stitch technique.

With its innovative water treatment system, Aqua Prep processes 100,000L of wastewater daily to under 10 NTU and 3 microns clarity for recycling, back through our 300 and 500kw HP pumps running at 20,000PSI (1380 Bar).
