

Monash Freeway Upgrade

Aqua Prep completed a Hydro Demolition project on a major Melbourne thoroughfare using Aquacutter Robots. AP removed over 120m³ of concrete for a bridge stitch.

Hydro demolition was chosen for its precision, structural preservation, and environmental benefits. Aqua Prep with its innovative water treatment system, processed 100,000L of wastewater daily to under 10 NTU and 3 microns clarity for recycling.

This project demonstrates the efficiency and sustainability of advanced hydro demolition techniques in urban infrastructure work.
