

Cold Cutting Underwater Piles

Singapore Strait Tuas Water Reclamation Plant
Cutting and removal of steel piles from marine structures environment.

Location: Tuas, Singapore

Year: 2019

McConnell Dowell engaged Aqua Prep for a critical phase of the Tuas Water Reclamation Plant project. The task involved removing multiple steel piles from existing marine structures. These piles needed to be cut at least 500mm below the final dredged seabed level, with minimal disturbance to the surrounding environment and other ongoing construction activities.
