

Sunace Brookly Decommissioning

Aqua Prep, partnered with and engaged by GRR and Michael Lunt, completed this project where we worked alongside Mike to execute the cleaning and education of two 50-kiloliter open-head effluent tanks.

This work was carried out as a critical component of the customer's compliance requirements for site exit. The process involved thorough high-pressure cleaning after the education was completed, ensuring the tanks met all necessary standards for decommissioning.

This comprehensive cleaning approach ensured all regulatory and environmental obligations were satisfied for the customer's site departure procedures.
