BUDD

Built-In Vacuum Cleaner

The Professionals

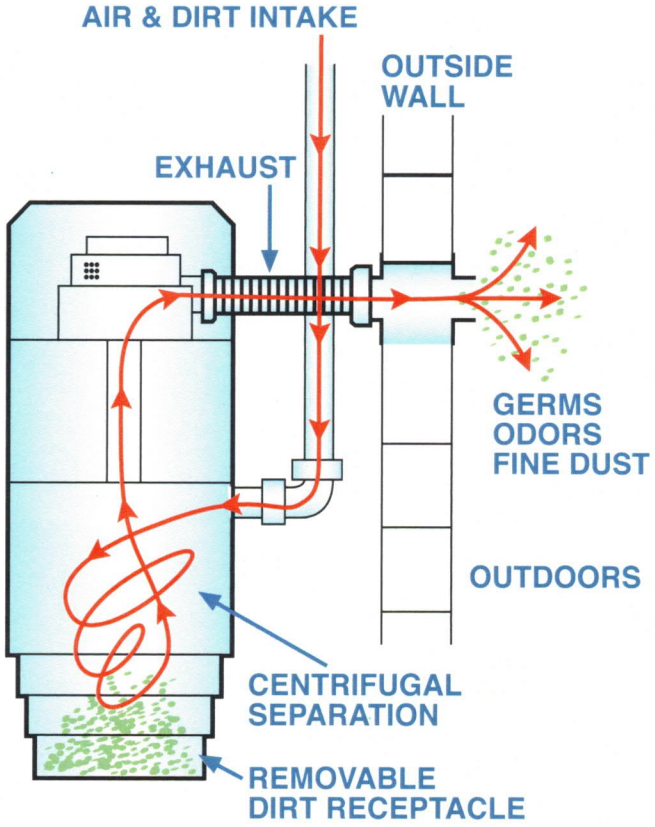

The only central vacuum company on the East Coast that manufactures, designs, installs and services our own systems—**in business for more than 65 years.**

We offer two central vacuum systems, both designed to last without the purchase of bags or filters. Particles that are too fine to capture or see, including viruses, germs, and microscopic particulates, are sent out of the home via an exhaust system.

1. **Standard System:**
   Inlets are placed throughout the home. The hose is brought to the inlet and plugged in, which begins the suction and dirt collection. We have 4 motor sizes based on your needs and preferences.

2. **Retractable:**
   Inlets are placed throughout the home with the hose built into the piping. Up to 50 feet of hose can be extracted to vacuum. When finished, you place your hand over the end and the hose retracts back into the wall. We offer our most powerful motor for this system, our model 1116.

Budd systems are designed to last and increase the value of your home while you keep your home healthier as you vacuum. Use it on all surfaces: wood, tile, carpet, and ceramic.

- **NHBA (National Association of Home Builders) Awards 5 points for installing a central vacuum.**
- **UC Davis School of Medicine reports that 61% of allergy sufferers' symptoms can be improved with the installation of a central vacuum.**
