

## **Why Do So Many Installers Prefer JASPER® Remanufactured Diesel Engines?**

- JASPER offers proven-quality Diesel Products, remanufactured to the highest standards in the industry, with over 75 years experience
- Wide selection of light and medium-duty Diesel Engines, built to specific vehicle applications for immediate availability and reduced downtime
- JASPER also offers a complete line of diesel fuel & air components including: Injectors, Fuel Pumps, Turbochargers, High-Pressure Oil Pumps, FICMs and a variety of Remanufactured Diesel Heads
- Products are tested with computer-assisted equipment to ensure consistent quality and optimum performance
- Free delivery, in most areas, with our own fleet of trucks equipped with lift gates & motorized hand trucks
- Highly-trained ASE Certified Customer Service Associates are readily available with prompt technical support
- Up to 2 years unlimited mileage parts & labor warranty with nationwide coverage to ensure customer satisfaction

Full warranty and core policy disclosure available on our website.  
Specifications subject to change without notice.

# As Engines Become More Technologically Advanced, So Do Our Processes and Training...

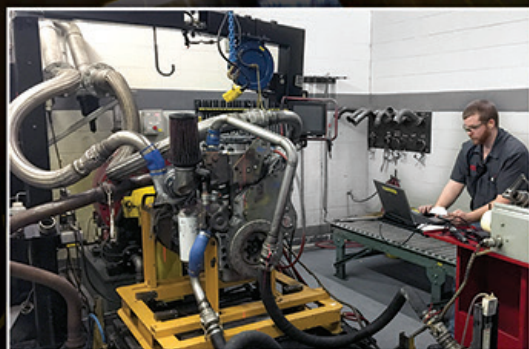

*JASPER's research and development, coupled with proven precision remanufacturing processes, result in diesel products that meet, or exceed, the original manufacturer's measured standards.*

*The latest Computer Numerical Control (CNC) machines provide the versatility of resurfacing an engine block and boring its cylinders. Improved probing and tooling features yield optimal machining accuracy and surface finish.*

*JASPER® builders, many of whom are ASE Certified and/or factory trained, are highly skilled, personally accountable and continuously trained to operate the latest high-tech equipment. For example, automatic head torquing equipment ensures accurate consistent torque, critical in the prevention of head gasket failures.*

*Fuel components are remanufactured in a climate-controlled and electronically-filtered environment. Pumps and injectors are tested and calibrated with computer-aided equipment that precisely measures fuel delivery and aids in the adjustment of all other key functions.*

*Live-run, computer-assisted dynamometer testing of Running Complete Diesels ensures trouble-free performance. Using the latest scan tools, JASPER tests engines under varying loads to simulate in-the-vehicle operation. Testing is concluded with a final engine run-in and inspection to ensure peak performance and operating efficiency.*
