

FOR IMMEDIATE RELEASE

Impact Service Group's REM Device to be Showcased at The Things Conference 2025

Ridgefield, CT – August 7, 2025 – Impact Service Group announced today that its **Remote Equipment Monitoring (REM) Device** will be a featured product at **The Things Conference 2025**, taking place September 23–24 in Amsterdam, the Netherlands.

Recognized as the world's largest LoRaWAN® event, The Things Conference highlights cutting-edge IoT technologies with real-world applications. The REM Device has been selected as a showcase example of innovation in action, demonstrating how multiple IoT solutions can seamlessly work together to deliver smarter HVAC monitoring and better decision-making.

Designed for **facility managers**, the REM Device provides **real-time visibility into HVAC and other critical equipment**, reducing downtime, extending asset lifecycles, and helping organizations make more informed, cost-effective choices. With both connectivity and monitoring capabilities, the device represents a practical leap forward in how facilities manage their most essential systems.

"Being featured at The Things Conference is a tremendous honor," said Clayton Callander, President of Impact Service Group. "It validates our commitment to developing technology that doesn't just look good on paper, but actually solves everyday challenges for facility managers. The REM Device shows the power of IoT when applied to real-world problems."

The REM Device will be showcased alongside other leading IoT innovations during the two-day event, providing attendees with an opportunity to explore how it is helping reshape the future of **facility management, HVAC monitoring, and asset reliability**.
