

The Marine Bathroom Extraction Kit is a compact, purpose-designed ventilation solution for extracting odorous & air from marine sanitary spaces. Designed for use on commercial vessels, the system provides reliable airflow performance while minimising installation complexity and space requirements.

Supplied as a matched system, the kit ensures predictable performance by combining a marine-rated DC extraction fan with correctly sized ducting and outlet components. Something else

Why This Product?

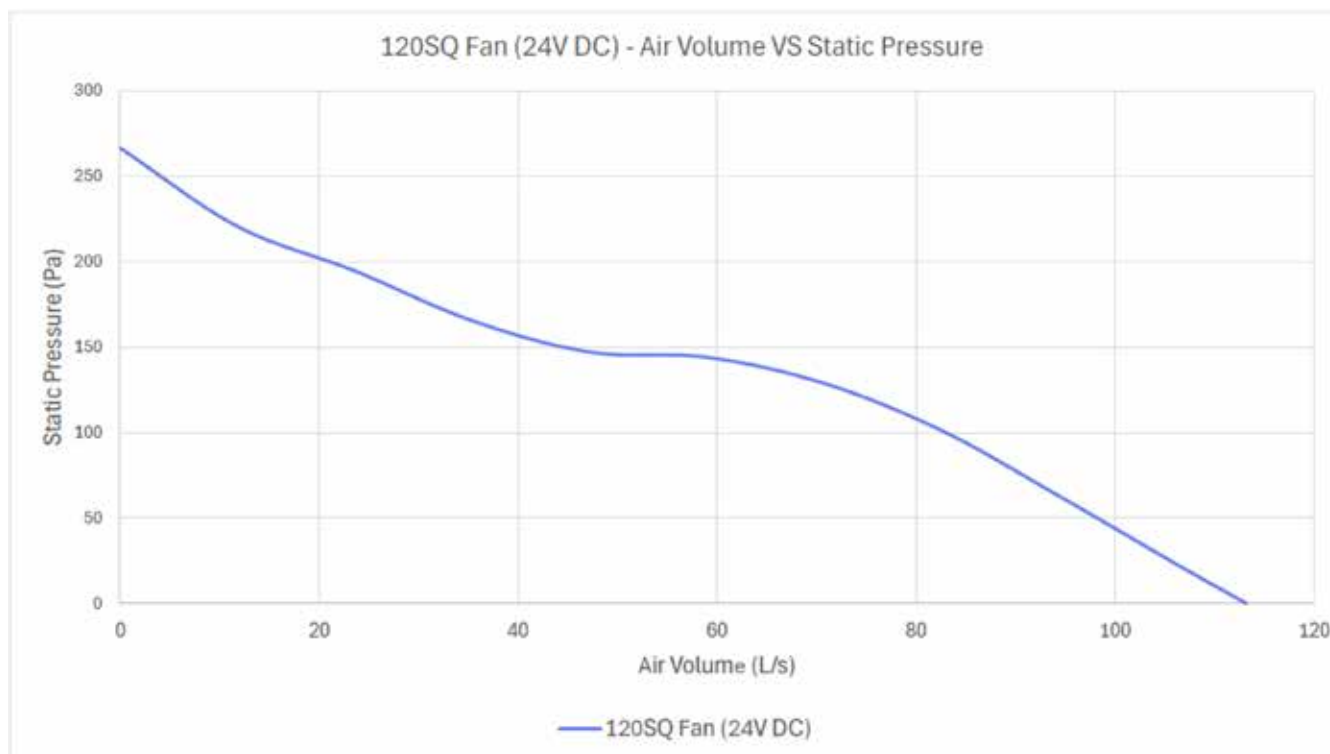

- Bathroom Extraction Fan: 24V DC axial fan optimised for low-to-medium static pressure applications.
- Ø75 mm Flexible Ducting: Marine-suitable flexible duct for confined spaces.
- Outlet Grille (MAFI 140SQ): External outlet grille for efficient discharge.
- Hot Air Outlet: Exhausts air to atmosphere.

Airflow Performance

Airflow performance is shown in the attached Air Volume vs Air Pressure curve.

Electrical Data

- Supply Voltage: 24V DC
- Rated Current (A) : 1.2
- Rated Power (W) : 28
- Power Source: Vessel DC system
- Operation: Continuous or switched operation

Design & Construction

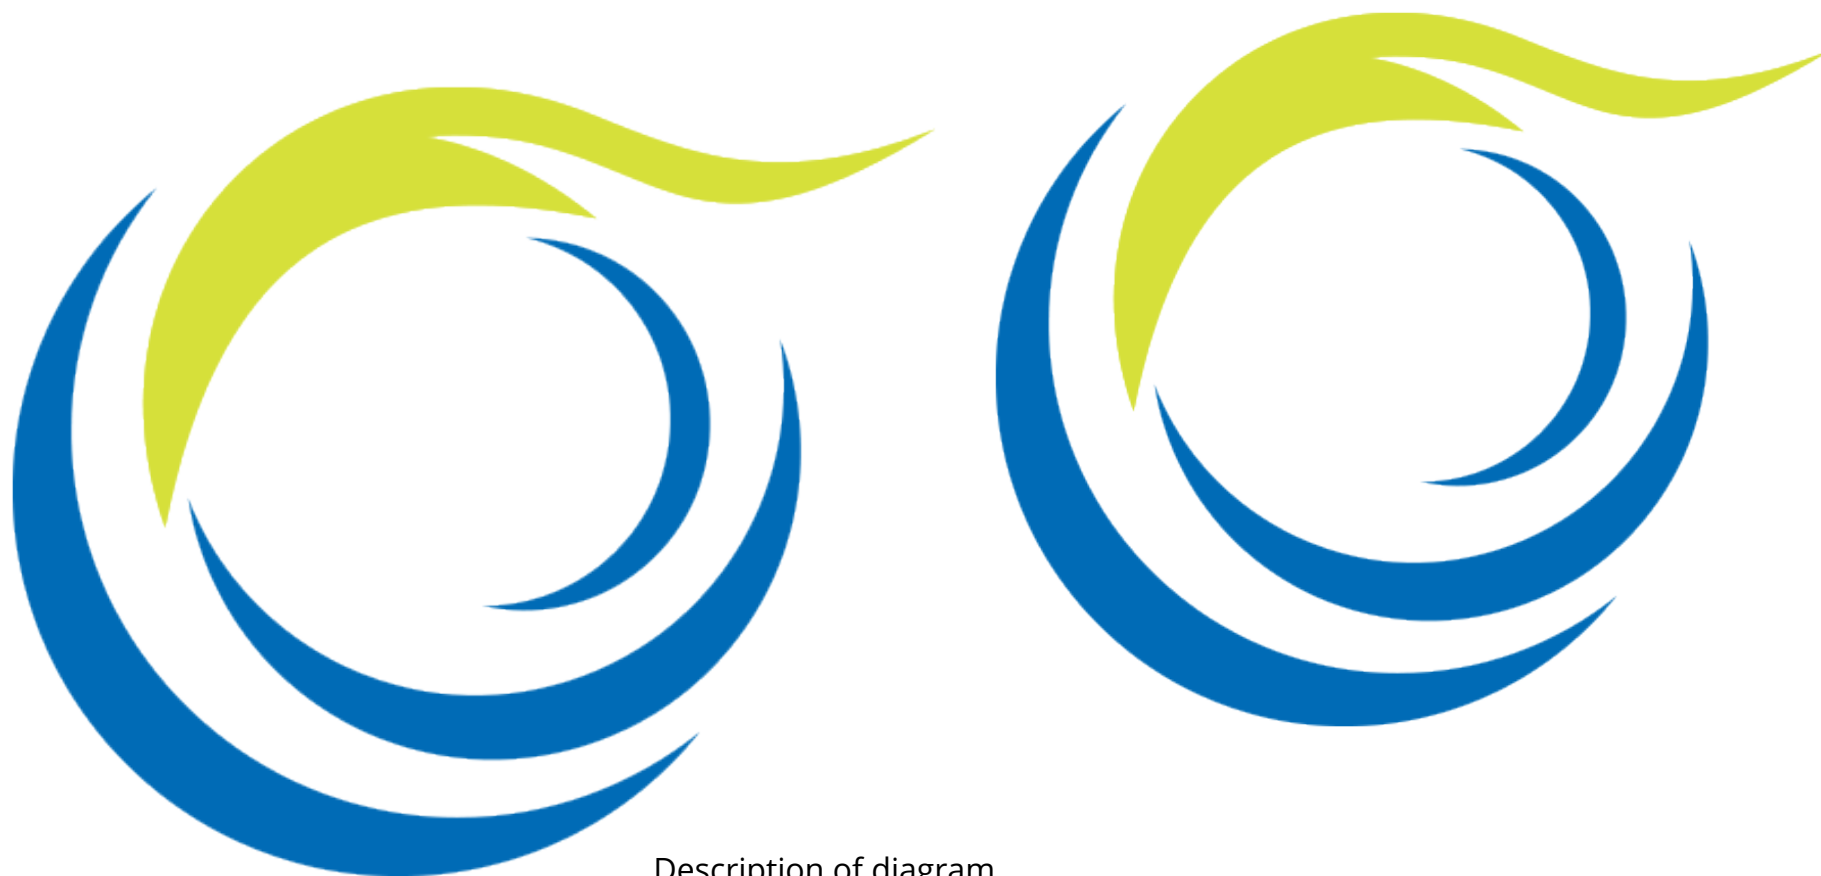

- Compact footprint for ceiling or bulkhead installation
- Corrosion-resistant materials
- Low-noise operation
- Simple mounting and service access
