Metal building construction (PEMB erector)

Services

Double Black Construction performs all phases of construction with our own teams as well as supervising a variety of trades and subcontractors. We take pride in completing quality projects on time and on budget.

We're your one source for steel building erection (foundation, construction and finish).

Our Client Focus

Double Black Construction focuses exclusively on steel building erection. It's all we do. Years of specialized experience have allowed our crews to develop repeatable installation methods, a deep understanding of manufacturer specifications and the ability to identify potential issues before they become costly delays.

For Building Manufacturers & GCs

We install and erect for select steel building companies.

For Engineers & Engineering Firms

We'll partner with you as general contractor for all building construction and installation.

For Architects & Architecture Firms

You create the vision and the blueprints; we bring it to life.

DOUBLE BLACK CONSTRUCTION

Recommended Authorized Builder

Double Black Construction has built strong relationships with North America's top building system manufacturers to deliver a wide variety of facilities to suit any business. We believe using high-quality products elevates projects and our partners have come to recommend us for their installation needs. Our manufacturing partners trust us to enhance their reputation throughout each project's lifecycle. Our deep engineering knowledge is demonstrated throughout every phase of construction – from planning to building through to occupancy.

Reliable Erection Process

When investing in a pre-engineered metal building (PEMB) project, the quality of the engineering system itself is only part of the equation. The success of the project ultimately depends on how accurately those structural components are erected in the field.
