Vegan

Veganism in dietary terms denotes the practice of dispensing with all products derived entirely or partly from animals.

Vegans avoid exploiting animals for any purpose. A typical vegan diet can include the following foods: vegetables, grains, nuts and fruits or foods developed from plants.

Plant Based

Plant-based diets are dietary patterns that have a greater emphasis on foods derived from plants.

A typical plant-based diet will avoid highly processed foods and live on 100% plant-based whole foods. A key difference between this and veganism is that veganism includes avoiding animal products of all kinds, as well as clothing, whilst plant-based usually only refers to diet.

Gluten Free and Vegan

A gluten-free diet is an eating plan that excludes foods containing gluten. Gluten is a protein found in wheat, barley, rye and triticale (a cross between wheat and rye).

Vegans avoid exploiting animals for any purpose. A typical vegan diet can include the following foods: vegetables, grains, nuts and fruits or foods developed from plants.
