

# EXIN LIGHT IECEX CERTIFICATE MARKINGS

IECEX is an international system for certification of equipment for use in explosive atmospheres. Its quality assessment specifications are based on standards prepared by the International Electrotechnical Commission (IEC).

The EXIN Light EX90L range of lights are regularly tested, assessed and certified by accredited third party test laboratories to ensure they adhere to these strict standards. Each EX90L model carries markings which indicate the particular environments that it has been designed for. These markings can be found on the rating labels attached to each light. The detail of the certified markings for each model is as follows.
