

**The miniZAP is the latest and smallest Beck-Zapper of it's class.
It offers an upper limit of efficiency, reliability and user convenience.
Uniquely, it is carried comfortably like a wrist watch.**

What does the miniZAP do?:

With the miniZAP an alternating current in the range of some hundred microamperes is conducted into the body to electrify the blood.

What is the effect of blood-electrification?:

It causes a deactivation of all foreign to the body microorganism (such as viruses, bacteria, fungi, parasites and pathogens) which the immune system identifies and therefore eliminates. The capacity of the immune system is strongly supported.

This active principle was patented 1992 in the USA from Steven Kaali und Peter M. Schwolsky (United States Patent 5,139,684). The discovery of the blood electrification is for mankind, according to Dr. Robert Beck, as equally significant as the discovery of penicillin.

The bonding of the red blood cells (rouleau forming) is cancelled; therefore the blood becomes more fluid, the oxygen supply and nutrition of the body cells is greatly improved. Both effects can be documented by means of a dark field microscope within a period of 3 – 6 weeks.

Application of the miniZAP:

To increase physical and mental health and performance

According to Dr. Beck

The zapper is applicable to all disease causing microorganisms.

For example in:

- | | |
|---------------------|--------------------------------------|
| - Cancer | - Diabetes typ II |
| - HIV/ AIDS | - Overweight |
| - Borreliosis | - Hair loss |
| - Herpes | - Lyme disease |
| - Fibromyalgia | - Muscle pain |
| - Malaria | - Tiredness |
| - Ebola | - Sleep disorders |
| - Worms | - Epstein-Barr-Virus (mononucleosis) |
| - Hepatitis A, B, C | - Cold, bronchitis, pneumonia |
| - Parkinson's | - Influenza |

Hint at medicine taking:

The blood electrification intensifies the effect of medicine, alcohol and drugs. Therefore it should be applied some hours before taking.

Combination of zapper and magnetic pulser:

When you apply a zapper (based on Dr. Beck), only the blood will be cleansed from pathogens but not the tissue and the lymph system. To prevent a reinfection of the blood via the lymph, you need to treat the lymph nodes with magnetic pulses. Which means with the use of the miniZAP to cleanse the blood, along with the Parapulser to cleanse the lymph system and tissues.

The full Dr. Beck-protocol includes all four:

1. the zapper 2. magnetic pulser 3. the intake of colloidal silver 4. ozonized water.
