

How AudioEye Is Different

AudioEye is a complete solution, not an accessibility overlay.

As smart as artificial intelligence has become, it simply cannot do everything required to test digital content and apply the fixes to make it accessible. AudioEye's accessibility platform and team of experts provide the full-coverage support needed to ensure your website is functional for all users.

For your site to be compliant, you must have an accessibility plan in place and make consistent progress on it, manually test and validate your improvements, and be able to accept feedback from site visitors.

AudioEye delivers compliance by identifying accessibility concerns, manually auditing sites and fixing problems, and providing a 24/7 help desk to address issues reported by users.

The Complete Solution

- 400+ automated tests and smart fixes to common errors
- Live monitoring of your site with every user visit
- Reporting and analytics showing progress and outstanding problems
- Manual site evaluations by certified accessibility experts
- 24/7 help desk where experts address issues raised by site visitors
- Sustainable Testing and Remediation (STAR) Plan for legal support
- Usability toolbar for user-controlled adjustments to your site

Accessibility Is a Journey

TEST

Our comprehensive, AI-powered testing gives real-time insights into the errors your website's visitors are encountering. Simply install the AudioEye JavaScript on your site and our platform gets to work right away.

REPORT

Our easy-to-understand reporting allows you to quickly see the improvements AudioEye has made on your site and the extent of remaining errors. Experts at our help desk address issues reported by users.

REMEDiate

Our patented algorithms automatically fix the most common and unique accessibility errors. Our team of IAAP-certified experts evaluate sites to identify and apply additional fixes.

MONITOR

Websites are dynamic and can change frequently. Our Live Monitoring system scans your site with every visit, identifying accessibility errors and performing real-time remediations that update your Accessibility Score.
